THE OFFICIAL TRAINING BIKE OF
LE TOUR DE FRANCE

THE OFFICIAL TRAINING BIKE OF
LE TOUR DE FRANCE

REDEFINING “BEST IN CLASS” YET AGAIN WITH THE NEW & INNOVATIVE TOUR DE FRANCE COMMERCIAL INDOOR CYCLING BIKE.

Give your members something they've only experienced outdoors—until now!

Whether your members are beginners or seasoned cyclists, the new Tour de France Indoor Cycle brings a new element of excitement to both your cardio floor and indoor cycling studio.

The innovative Tour de France Indoor Cycle combines the unique features of the FreeMotion® S Series Indoor Cycles with the engaging, interactive console of the popular home-use Tour de France bike. With superior technology and advanced engineering, your members will line up to challenge themselves and receive a truly realistic outdoor cycling experience.

INNOVATIVE DESIGN

The Tour de France bike is designed to accommodate a wide variety of users and features the same design specs as the FreeMotion® S Series—including precision geometry for a personalized fit, patented adjustment knobs for ease of use, and pop-pin height adjustments for safety.

INCLINE/DECLINE

Equipped with a motorized terrain-replicating feature controlled by built-in video workouts, the Tour de France bike seamlessly declines and inclines from -10% to +20% as the ride topography changes.

EDDY CURRENT MAGNETIC RESISTANCE

Eddy current magnets provide smooth, adequate resistance to match the steepest of hills. Nothing touches the flywheel so the system is maintenance free and without need for replacement parts.

GATES CARBON DRIVE™ SYSTEM

First introduced to indoor cycling on the FreeMotion® S Series bikes, the maintenance-free Carbon Drive system delivers the quiet, smooth ride of a belt drive but with the strength and efficiency of a chain drive. The Carbon Drive system, combined with a 5:1 gear ratio, perimeter-weighted flywheel, and freewheel feature—give the Tour de France bike the smoothest, most realistic outdoor-bike feel. The carbon belt has a 5-year manufacturer's warranty.

OUTDOOR RIDE FEEL

The Tour de France bike features drop handlebars for multiple hand positions, dual-sided pedals, and an ergonomic gear shifting system that allows riders to adjust to every incline, decline and resistance level.

EASE OF MAINTENANCE

The Tour de France bike is one of the most maintenance friendly bikes on the market. This bike was built to sweat on. The maintenance-free magnetic carbon belt, rust-resistant aluminum frames and hidden stainless steel hardware make the bike easy to maintain without the time and expense of replacement parts.

DIRECT WATTS MEASUREMENT

Just like on the FreeMotion® S Series Indoor Cycle, the rider's power output is measured by strain gages on the left crank arm. Accurate, consistent watts and other data (RPM, speed, distance, time, calorie burn, and more) are displayed on the touch screen console. This accurate, consistent data allows an experienced cyclist to realistically simulate a training ride indoors and a beginner to easily and independently execute a personal-trainer-assigned ride.

TOUCH SCREEN CONSOLE FEATURING iFIT® AND GOOGLE MAPS™

The high-resolution touch screen console gives riders multiple screen options. iFit® enables riders to upload and track their personal workout data, and Google Maps™ provides an endless supply of real-time, interactive rides to keep your members engaged and excited for their next adventure.

LIGHTWEIGHT, ALUMINUM FRAME

Resistant to rust, this lightweight aluminum frame is maintenance friendly and easy to move between classes. All hardware is hidden stainless steel to further prevent rust from salty conditions.
